

WINTER 2007 GEC COURSE (GEOG 597.02) Call number: 009848-8

Geography 597.02 Integrated Earth Systems: Confronting Global Change

Link to class webpage and more information: [click here](#)

This course is designed to introduce students to a very contemporary issue: global climate and environmental change. We will explore the processes that control the Earth's climate and examine changes that are now occurring. Students explore how human activities are now affecting their environment in many ways they have not considered. The class format includes lectures, group discussions, and exercises to provide experience collecting and using available data. An important aspect of this class is to help students develop skills that will be useful in their careers and to provide them with tools that facilitate their ability inform themselves about other contemporary issues that affect their lives.
